

UPGRADE X-CRUISER 385 AVANT

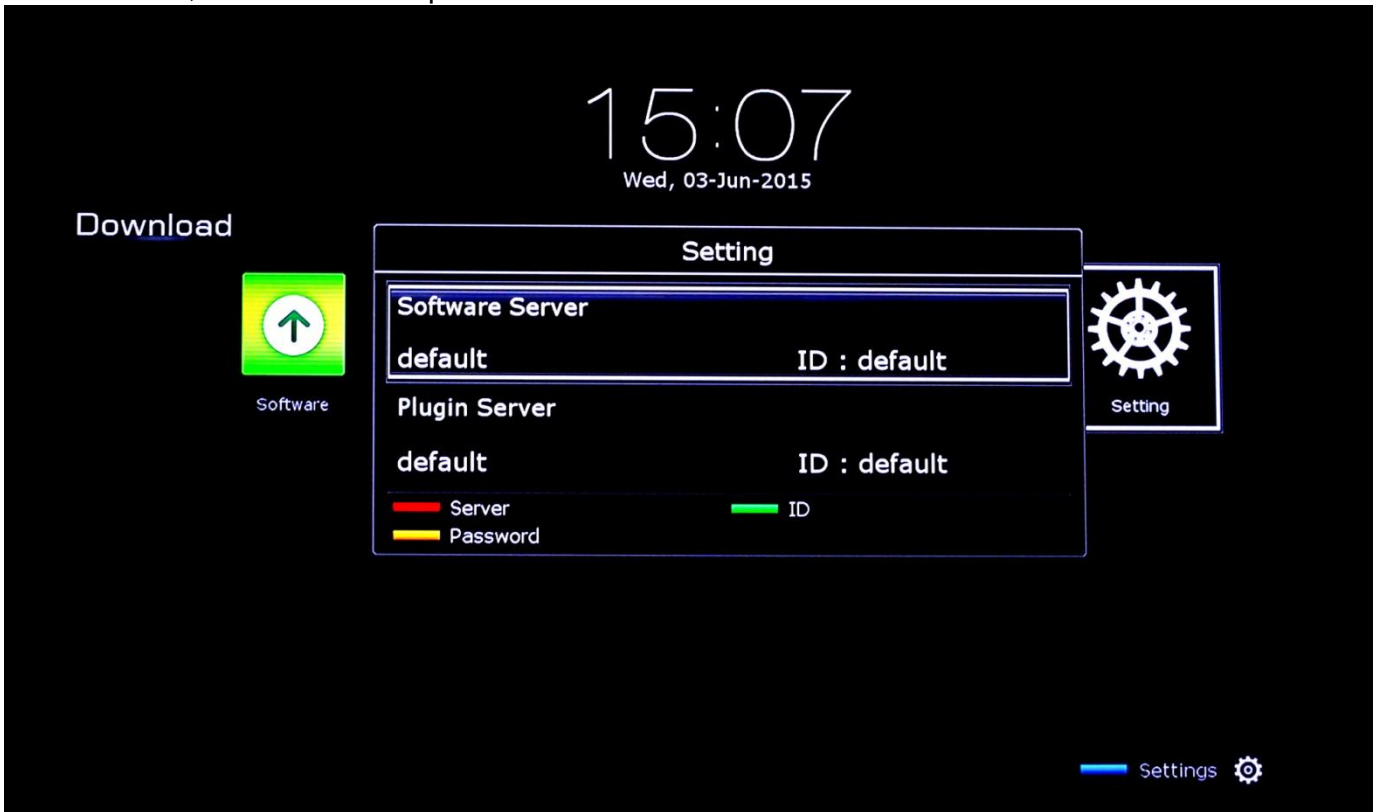

Your X Cruiser 385 Avant has many features that you will no doubt be very pleased with, including the ability to upgrade the firmware via the internet.

In order to do this you can follow these easy steps:

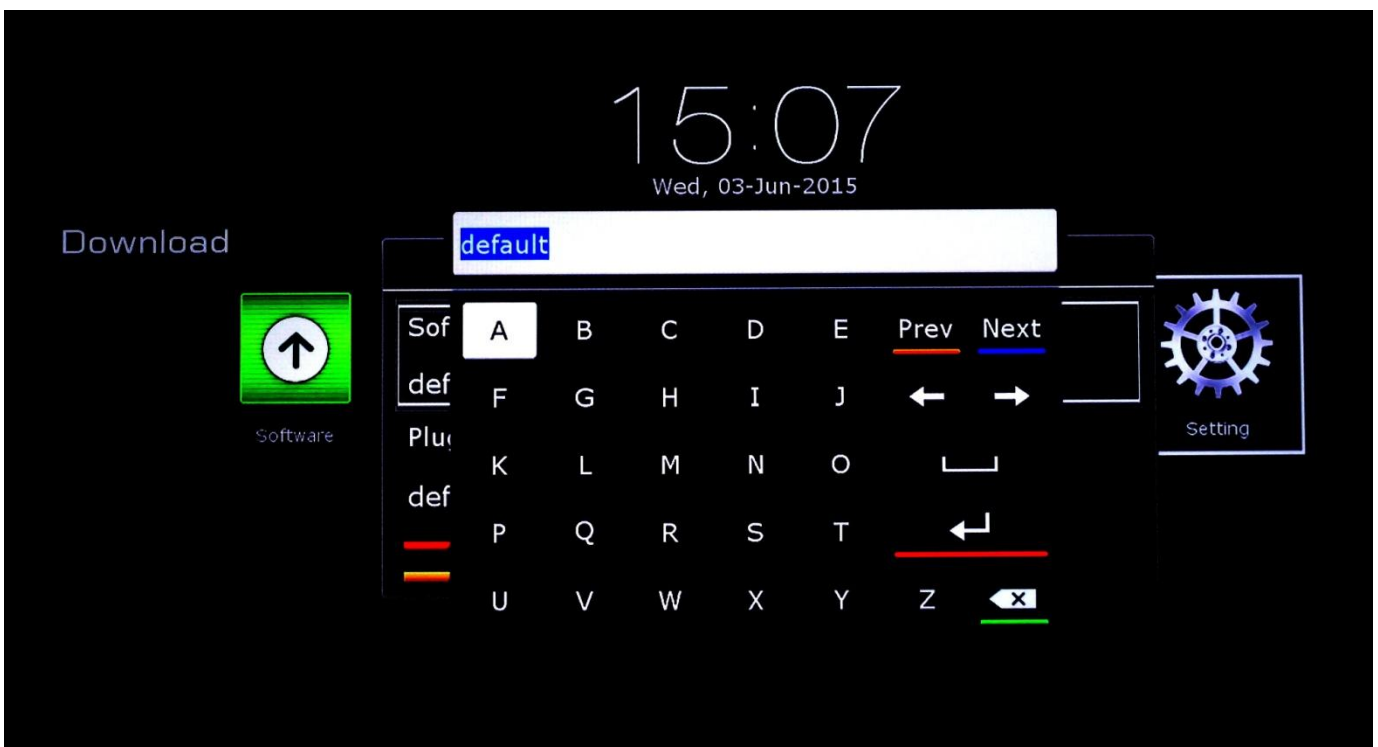

- 1) Insert a memory stick into the USB slot of your Avant
- 2) Push the menu button on your remote, and click OK on Download

3) Arrow across to **SETTING** and push **OK**. It is important that the server settings are set to default, as outline in the picture

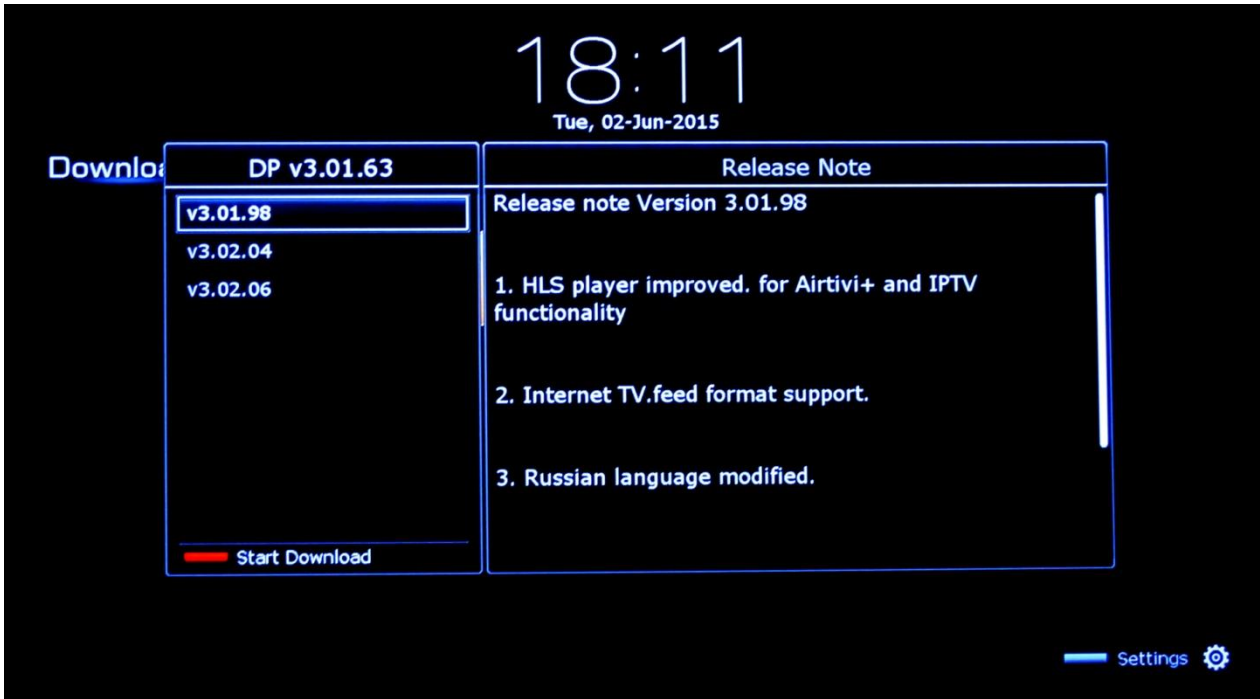

4) If the server is not set to default, push the red button on your remote and enter **default**

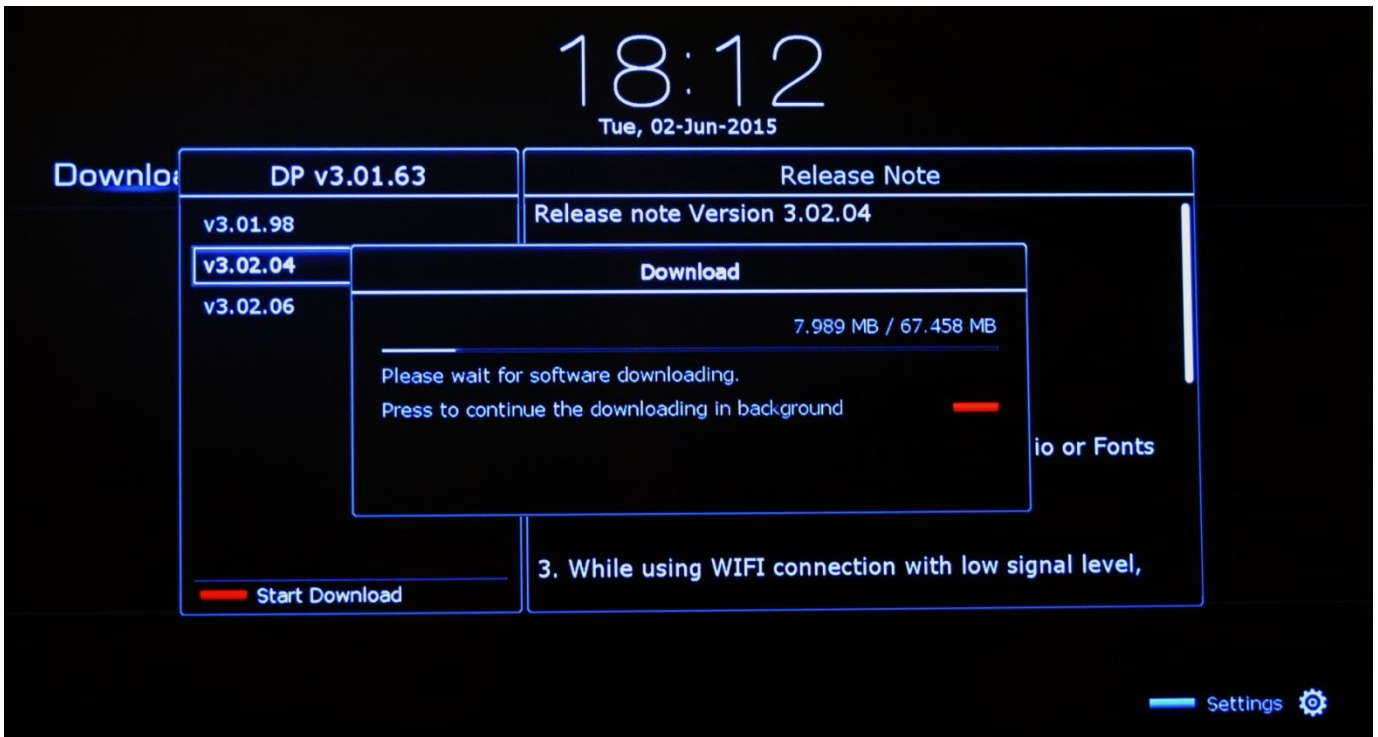

5) Exit out till you reach the **Down load** screen. Arrow to **SOFTWARE** and push **OK**

6) Available software versions will appear with release notes as to what bugs have been fixed or updated. You need to select the version you wish and push the red button on your remote to **START DOWNLOAD**

7) The download will commence, Follow all on screen prompts

8) As the new software is written to flash memory it is imperative that power is not lost to the unit, this will result in the receiver not being able to boot up, and maybe irretrievable.

Updating flash image file

Writing IRD file to Flash memory
Do not turn it off your device during
the upgrade. Please wait.

- 9) From here the unit will continue to write the new software, and will automatically re boot. Your receiver should be ready for normal use again
